Innovative in Teaching

- Allow for spontaneous interactions. For example, during small group or large group discussions, allow students to discuss freely without offering too much feedback.
- Create time for informal class opportunities; for example, provide time for students to talk and get to know each other. This can be through small group discussion, games, and hands-on activities during class time.
- Learn everyone’s names and make sure everyone in the class knows each other’s names as well. If possible, arrange chairs in a circle so students can see one another.
- Encourage students to be intrinsically motivated; for example, one professor noted the use of a Facebook page where students could have discussions based on the course topic. Even after the course ended, the students continued to post to the course Facebook page
- Have students facilitate a roundtable discussion
- Talk to other faculty and find out things they have tried and what worked and what did not work

Declaration

I can do the job with great sense of responsibility and always try to make a positive contribution and efforts to prove myself as an asset to the organization.
