**Report on
One Day workshop on
Six Sense Robotics and Wrist Control Robotics**

Six Sense Robotics will focus on getting you up and running with Arduino quickly, so that you will understand the basic procedures for working with Arduino and can explore further on your own. An Arduino is a small computer that you can program to control things like lights or motors along with listening to components like motion detection sensors. It can give your project interactivity without needing an expensive and large circuit. Instead, you use a computer to program the Arduino, upload your code to the Arduino, and hook up your circuit. The duration of this workshop will be two consecutive days with eight hours session each day, in a total of sixteen hours properly divided into theory and hand on practical sessions. At the end of this workshop a competition will be organized among the participating students where each participating student will get Certificate of Participation and the Winners will get Certificate of Merit.

This workshop mainly focuses on the students eager to learn Robotics from Basic. They will get the chance to expand their knowledge in the field of designing, construction, operation, and application of Robot with real time hand on practical experience.
